SPACE IS LIMITED

Learn how you can design and implement inclusive educational services for preschoolers with ASD. Participants will leave this session with practical tools for immediate classroom use. Take the first step toward incorporating best practices for ASD intervention into your classroom by signing up today!

These techniques and concepts in this training derive from 20 years of testing and refinement of Project DATA (Developmentally Appropriate Treatment for Autism), which has been replicated in schools across the country. Topics covered include an overview of autism, assessment, instructional programming, progress monitoring, family support and collaboration.

Project DATA presenters

Project DATA presenters are expert trainers with years of experience as Project DATA teachers, researchers, and program coordinators. Our trainers are also Board Certified Behavior Analysts (BCBAs), providing a blend of educational and behavioral applications to this professional development opportunity. The presenters have provided training on the Project DATA model with many teachers, administrators, and related service professionals across a variety of classroom and learning environments and for replication in school districts across the states.

Clock Hours and BACB CEUs available
